

## Wood Pellet Stoves

If you are not in the position to install a full wood pellet heating system in your house you might consider a pellet stove.

Pellet stoves are attractive and give you the focal point of a living flame in the grate.

### *The Windsor Wood Pellet Stove*

Wood pellet stoves are also highly automated, they can be operated on thermostatic controls and require very little maintenance.

The pellets are simply stored in a hopper at the back of the stove and automatically fed in relation to heat demand. Ash only needs to be removed occasionally.

The Windsor wood pellet stove has an output of 37,000 BTU's this will easily heat a very large open plan room.

## Wood Pellet Stoves

A pellet stove operates at 80%-90% efficiency as against 20%-30% in an open fire, that's a lot more heat for your money and no messy cleaning or lifting heavy bags of coal.

The Rika stove has the ability to supply heat to radiators, as well as being an elegant space heater. It is the perfect supplementary heat source.

*The Rika Stove*

With the Rika stove you can reduce the room temperature produced by your primary heat source to 15 degrees, the Rika pellet stove provides the necessary additional warmth at the touch of a button.

This saves you 30% of your heating costs (for each reduction of 1 degree your primary heat costs fall by 6%).

## Wood Chip Boilers

Heat-Tech Solutions has formed a strategic partnership with a company named Clearpower.

Clearpower can supply a range of wood chip boilers which we install and commission.

Clearpower can offer a contract, guaranteeing the supply of fuel.

Wood chip boilers are better suited to larger commercial / industrial installations.
